Ranked as one of the top 100 universities in the nation and in the top 40 national public universities by *U.S. News & World Report*, Stony Brook is repeatedly recognized for its engagement in cutting-edge research and novel approaches to inquiry and understanding. We have been one of only 94 institutions in the country to be designated a “Very High Research University” by the Carnegie Foundation. Our faculty have been responsible for more than 1,900 inventions and more than 550 patents. With more than 70 academic departments, Stony Brook has been ranked among the top 40 institutions funded by the National Science Foundation, and our expenditures on organized research have exceeded $160 million. With graduate program offerings in nearly 50 fields, The Graduate School is here and ready to provide you with the environment and resources you need to excel.

**WHY CHOOSE STONY BROOK?**

**Research Excellence**
The mathematics and natural science programs at Stony Brook host opportunities for graduate students in areas such as chemical biology, geophysics and geoscience instrumentation, theoretical physics and geometry. Interdisciplinary research programs in quantitative biology, drug discovery and ocean conservation are also available.

**Outstanding Faculty**
Stony Brook faculty have been the recipients of numerous international awards and prizes, including four Nobel prizes, seven National Medals of Science, four MacArthur Foundation Prizes, three National Medals of Technology and Innovation, and two inductions into the National Inventors Hall of Fame.

**Collaborative Opportunities With World-Renowned Research Centers**
Stony Brook is proud to have working partnerships with Brookhaven National Laboratory, as part of our partnership in Brookhaven Science Associates, and Cold Spring Harbor Laboratory. Many of our graduate students work alongside lab investigators on research initiatives, and researchers teach courses at Stony Brook.

**Funding Opportunities**
The Graduate School at Stony Brook University offers a variety of highly competitive funding opportunities for doctoral study, such as teaching and research assistantships, Graduate Council fellowships, the Dr. W. Burghardt Turner Fellowship and GEM Fellowship, as well as tuition scholarships. Enrolled students also can compete for a variety of other fellowships and awards.

**Professional Development and Growth**
The Graduate School works at the intersection of research and educational advancement to support the success of our scholars and promote diversity and inclusion in graduate education. The Graduate School’s Office for Integration of Research, Education and Professional Development and its Center for Inclusive Education offer a multitude of support programs and development opportunities to assist graduate students in achieving their academic and professional goals.
**WHERE CAN OUR GRADUATE PROGRAMS TAKE YOU?**

**KESTREL PEREZ** graduated in 2011 with her PhD in marine and atmospheric sciences. Under the advisement of Professor Stephan Munch, Kestrel’s dissertation examined the evolution of size in fish and evaluated the strength of natural selection and the presence of prolonged trade-offs from an early period of fast growth to better understand the evolution of size. She joined the School of Marine and Atmospheric Sciences in 2005 as a scholar in the Alliance for Graduate Education and the Professoriate, and is a recipient of the Dr. W. Burghardt Turner Fellowship. Upon completing her PhD, Kestrel went on to a post-doctoral position at the University of Texas at Austin in the Department of Marine Sciences.

Kestrel is an assistant professor of biology at St. Joseph’s College in Brooklyn, N.Y., where she is teaching courses in marine biology and evolution and ecology, and mentoring undergrad researchers. Her research centers on marine biology. Specifically, she focuses on fish and invertebrate evolutionary ecology, the study of life history traits and maternal investments, and how variation in these areas influences larval fitness and recruitment.

**DEGREE PROGRAMS**

- Applied Mathematics and Statistics, MS, PhD
- Chemistry, MS, PhD
- Geosciences, MS, PhD
- Geospatial Science, graduate certificate
- Marine and Atmospheric Sciences, MA, MS, PhD
- Mathematics, MA, PhD
- Physics, MA, MS, PhD

**INSTITUTES AND CENTERS**

The newly funded Center for Mesoscale Transport Properties (m2m) in Stony Brook’s Center for Excellence in Advanced Energy will conduct basic science research to advance and enable the deliberate design of materials and components to achieve higher-performing, longer life and safer energy storage systems, including batteries.

The C.N. Yang Institute for Theoretical Physics engages in research of fundamental interest. Quantum-field theories supply the language for our description of matter on the smallest scales. Supersymmetric field theories and supergravity and string theories are being studied and developed, with attention to both their mathematical structure and physical consequences.

The Simons Center for Geometry and Physics brings together mathematicians and theoretical physicists to inform and learn from each other with the long-range goal of better understanding the deeper connections between the two disciplines.

The Louis and Beatrice Laufer Center for Physical and Quantitative Biology is a hub for research, advancing biology and medicine through discoveries in physics, mathematics and computational science. Researchers come from the areas of chemistry, physics, applied mathematics and statistics, computer science and microbiology.
